[Proposal]

Trust Wallet is a non-custodial, mobile cryptocurrency wallet founded in 2017. It has a wide range of functionality and allows users to access a large selection of blockchains, digital assets, and DApps.

Trust Wallet acts as a secure, open-source, and decentralized crypto wallet. You can use Trust Wallet to access over 20,000 Ethereum-based and EVM-Compatible tokens, 70 blockchains, and over one million crypto assets, including Bitcoin (BTC), Ether (ETH), BNB, BUSD, and Tether (USDT).

With more than 11m monthly active users Trust Wallet is one of the largest wallets on both mobile and desktop.

Trust Wallet has maintained its key principles of never having access to users' wallets, holding private keys, or requesting personal information.

[Proposed integration]

We are requesting the integration of Trust Wallet into the Aave App. We would like to get the Trust Wallet connection point in the default connection modal.

We want to get a connection point for both mobile and desktop. These one will be shown depending on the users' devices to give them the best UX possible.

Here is our documentation for integrations:

- App: [Optimizing your dApp for Trust Wallet - Trust Developer](#)

- Chrome extension: [Adding the Trust Wallet Browser Extension to Your dApp - Trust Developer](#)

Through this change we want to give our users the opportunity to use Aave without friction.

[Current and proposed integration of Aave in the Entity ecosystem]

Aave is already put in good position inside our mobile app and we will continue.

We would love later to organise co-marketing around educational content between ours communities.

[Technical integration]

We are going to make 2 PR. One for the mobile support and one for the chrome extension.
