There are two housekeeping actions that, if approved, will be added to the upcoming spell:

1- MCD_PSM_PAX_A_INPUT_CONDUIT_JAR currently has a balance of 84,211.27 USDP

. As the Debt Ceiling of PSM_PAX_A

is 0 DAI

, this USDP cannot be deposited into the PSM through the usual contract calls. Therefore it has not been ultimately realized in the Surplus Buffer, in contrast with previous rewards payments, and cannot be utilized by the Maker Protocol.

The spell team have aligned on the following solution that will be included in the next spell.

Raise Debt Ceiling of PSM_PAX_A

to 100,000 DAI

- accounts for the outstanding debt of the vault and using a round number to facilitate the review process.

Call push(uint256 amt)

on the the PSM_PAX_A_INPUT_CONDUIT_JAR

contract with an amt of 84,211.27

, depositing the contents of the contract to the PSM and receiving an identical amount of Dai into the PSM_PAX_A_JAR

contract.

Call void on the PSM_PAX_A_JAR

contract to deposit the Dai to the Surplus Buffer.

Decrease Debt Ceiling of PSM_PAX_A

back to 0 DAI

.

This will have the following net results:

Debt Ceiling remains at 0 DAI

after the transaction has been executed.

Dai generated from PSM_PAX_A

increases by 84,211.27 DAI

.

USDP balance of MCD_JOIN_PSM_PAX_A

increases by 84,211.27 USDP

.

USDP balance of PSM_PAX_A_INPUT_CONDUIT_JAR

decreases to 0 USDP

.

Surplus Buffer increases by 84,211.27 DAI

.

2- A new BlockTower wallet address will be whitelisted in the RWA015-A

output conduit:

0x6759610547a36E9597Ef452aa0B9cace91291a2f
