LINK.e has 64 million dollars of liquidity on Trader Joe. Compare that to the 45 million dollars of WBTC.e or 39 million dollars of liquidity with DAI and it makes a lot of sense to allow LINK.e to be used as collateral.

Should we use LINK.e as collateral on the AVALANCHE market?

I tried to create a snapshot poll and vote on some other stuff but Snapshot.org keeps throwing "Oops… Something Went Wrong."

Not sure how to debug that.

Anyway, adding LINK.e as collateral is probably safe and will likely increase activity on the AVALANCHE market.
