Abstract

AIP-300 has been successfully passed and so the Beta Testing Group is Alive!

Its open to all who wish to participate, including brand new community members who wish to have a tangible way to contribute and any project seeking to have an AIP passed.

Objective

The Beta Testing Group seeks to provide projects valuable user feedback that enhances project quality and ensures the community's voice is heard. This supports Project's quests to have their AIPs passed. Community members acting as Beta Testers provide significant value to the community.

For a project that a member tests that is passed, then they will be awarded a custom Forum badge, showcasing the title "Beta Tester" and the description "Participant of the Beta Testing Program."

Process

1. Any projects interested in being tested please post on this thread. Hangout can then pick up the conversation with the project owner in DM to organise the creation of the specific Beta Testing Survey that provides most value to the Project owners.

2. A Project specific Beta Testing thread will be created along with a link to the survey to be completed by Beta Testers. This Thread becomes the place for testers to interact with the project and provide open 2 way communication.

3. Upon the project successfully passing its AIP those testers who have contributed will be awarded the Beta Testing Badge.

Any questions please reach out to me directly!
