Winners at ETH Waterloo built contracts that

- enable you to unlock two different sets of data with two separate passwords (for example, if someone forces you to open an account in front of them, you would use the second password which unlocks a less-valuable section of that account). [Rubber Hose](#)

- conduct privacy-preserving analysis of health data [uFlo](#)

- manage "loot boxes" that can be bought and sold without being "opened" [LootBox](#)

- accelerate Cheeze Wizards gameplay by +50% [Fonduels](#)

Most projects submitted github repos along with their projects on Devpost!
