I followed the compute workflow and everything seems to work fine, no errors, etc. When I run numerai docker run

it is successful and my predictions are uploaded to numerai.

When I run numerai docker deploy

, everything seems fine, I even get the, "Task is now in the DEPROVISIONING state, your code is finished." message. However the predictions never end up being uploaded.

Anyone ever experience this? Is there anywhere that contains logs of happens AFTER the deprovisioning message? Thanks.
