Supported Networks

This section lists the addresses of all the Safe contracts deployed grouped by version and chain. The same list can be found on the [GitHub repository(opens in a new tab)](#) , from which these pages are automatically generated.

The most recent version of the Safe contracts isv1.4.1 , which adds compatibility with the ERC-4337. However, it's not supported yet in the [Safe{Wallet}(opens in a new tab)](#) interface and the Safe Transaction Service. For that reason, depending on your use case, it might be recommended to continue usingv1.3.0 until there is better support.
