Hello guys,

The Keplr wallet shows "Failed to get response" in the Secret section. Also, there are no validators shown at the [Keplr - Browser extension wallet for the Inter blockchain ecosystem.](#) . Could you advise how to solve this problem?

This problem is for 4 days yet. How to unstake SCRT tokens?

I've tried logging out and in again, it doesn't help. Also, I reinstalled Keplr Chrome app, and when login, my SCRT balance became zero. But [secretnodes.com](#) block explorer shows my balance correctly.
