Dear GMX Gov,

I would like to introduce you to Copin, a platform designed to help you easily search and analyze in-depth all on-chain data of a trader on GMX. Copin will give you a lot of options to see valuable insights without having to spend a dime. I believe this platform will attract more users to GMX.

Not only do we stop at the basic parameters, we also supplement and optimize the indicators to give users the most all-in-one analysis tool possible.

- Analyze On-Chain Trader Data:

Copin provides comprehensive on-chain trader data gathered from blockchain networks and decentralized exchanges. Users can analyze this data to gain insights into the performance, positions, and trading strategies of on-chain traders.

- Evaluate Trader Rankings:

Copin displays a ranking of on-chain traders based on different criteria such as ROI, PnL, win-rate, and more. Users can assess the rankings to identify successful traders and evaluate their past performance.

- Backtesting:

Enables users to assess the historical performance of traders or trading strategies before choosing to copy them. These features offer valuable insights into past performance, aiding users in evaluating potential future success.

We have tried to visualize and provide many parameters to focus on analyzing traders. This will help users save more time when searching and analyzing a trader. They can build their own filter set, their own analysis, or even a separate trading strategy and test it with the backtest feature.

Copy Trading

We have built a copy trading system and are in the testing phase with investors, partners, and internally. We are not only stopping at copying; we are also testing and optimizing the system so that users can freely use their own tactics in copy trading to bring profits.

We are always open to feedback and have a strong passion for trading. We would be grateful to receive more support from communities, influential individuals, and organizations. Most importantly, we hope to be a part of the GMX ecosystem.

If you are interested in cooperating, learning more, or experiencing the copy trading feature, please contact me directly via Telegram ([Telegram: Contact @Anol0x](#)).
