# Use non-EVM networks

You can interact with users' accounts on non-EVM networks by connecting to existing [MetaMask Snaps](#) .

Non-EVM networks are blockchain networks that are not compatible with the Ethereum Virtual Machine (EVM). Non-EVM dapps and MetaMask can't directly interact with each other. By connecting to dedicated non-EVM Snaps, you can extend the functionality of MetaMask and integrate non-EVM networks into your existing MetaMask workflow.

MetaMask provides Snaps for the following networks:
