Hello dYdX community

I am Minmin, representing minmin-net and serving as a DAO member of the CryptoLearningClub (CLC).

Why Validate dYdX?

At minmin-net, we align with dYdX's mission to foster transparent financial services. With our experience in the Cosmos ecosystem and dedication to education and research, we are committed to enhancing network security and promoting decentralization in this new venture.

Who Are We?

Minmin-net, based in Japan, is a small team but rich in experience. Our journey commenced in 2020 as a validator for Cosmos Hub. Since then, our responsibilities have expanded to include validating for IRIShub and HUAHUA.

What Are Our Strengths?

Expertise:

We have developed considerable expertise over the past three years, serving as a validator within the Cosmos ecosystem. This experience has allowed us to refine our skills in several key areas: We are proficient in the prevention of DDoS attacks; we have acquired a sound understanding of the use of Key Management Systems to protect against double signing; and we have consistently been active participants in governance, casting our votes on almost every proposal.

We also operate distributed data servers in Asia and Europe.

Dedication to Web3:

Our commitment to the Web3 realm distinguishes us.

CLC, a Japanese-centric platform, is dedicated to demystifying Web3 and blockchain (https://cryptolearningclub.org/

).

As a DAO member of the CLC community, we've played a crucial role in exposing a broad spectrum of Japanese users to the Web3 universe through our educational endeavors.

We're confident that our engagement initiatives will spark substantial curiosity and support for the dYdX project within the Japanese community.

We are extremely eager to apply our expertise and dedication to the dYdX platform. We are confident that we can cultivate a strong, mutually beneficial relationship that will advance the ideals of decentralized finance.
