Hello everyone,

I'm curious about the future roadmap for Arbitrum. What are the major developments, upgrades, or new features planned for the network in the coming year?

I'm particularly interested in any updates related to scalability improvements, new use cases, or ecosystem growth. I have referred https://forum.arbitrum.foundation/t/arbitrum-governance-upgrade-rollout-timeline/26462- msbi documentation guide but still need help.

Additionally, are there any significant partnerships or collaborations that we should keep an eye on?

Looking forward to hearing your thoughts and any insights you might have!

Thanks in advance.
