Hello Community!

It's great to be here.

I would love to confirm if the community has an existing strategy that supports regions around the world that are growing the ecosystem in bringing more developers, users, content and marketing exposure.

This helps with other ecosystems a lot.

I have a wide connection with 15 African countries with good blockchain Dev communities that will add to the growth of Celestia.

Having experience with building Regional Communities from NEAR Protocol, Aurora, and Solana, this will be something good to explore.

Who can I meet for further conversations?
