☑️

ENV Variables

Blockscout uses ENVs for setting hundreds of different parameters. Please see the various sections for ENV names, descriptions, default values and versioning.

- [Backend ENVs: Common](#)
- [Backend ENVs: Chain Specific](#)
- [Backend ENVs: Integrations](#)
- [Frontend ENVs: Common](#) You will find deprecated ENV vars on the [Deprecated ENV Variables](#) page.

Set ENV Variables with CLI

Use the export command to set variables. For example:

```
```

Copy exportETHEREUM_JSONRPC_VARIANT=nethermind exportCOIN=POA exportNETWORK=POA

```
```

Required ENV variables

Please see the [Backend ENVs page](#) for details. Required variables are located in the General Management section and marked with a ✓

Example ENV Variables Set

The following variables are set for the [Gnosis Chain Blockscout Instance](#) .Note that some variables are not included as they contain private information which should not be exposed.

?

Time format

Can be set in format1h for 1 hour,1m for 1 minute,1s or1 for 1 second,1ms for 1 millisecond

Note :Before release 5.1.2, all environment variables of time format supported only integers in seconds (without dimensions) as values.
