After been active in the decentralized blockchain ecosystem since 2015, I have decided to pursue a PhD on decentralized blockchain governance. For that I am interviewing a handful of projects, and would love to include MakerDAO in my list. Is there anyone available who can - on behalf of MakerDAO- answers 7 questions?

Am looking for someone who can represent MakerDAO's thinking, and appreciates/understands the philosophy of a DAO.

Not looking for the what (for instance a set opinion on forks), but more for why (how you come to such an opinion).

Goal is to get a better insight in principles behind decentralized governance, that hopefully will help educate and support future projects.

Look forward to getting responses.
