Hi all.

Midascapital.xyz enables LP tokens and LSDs (yield bearing assets) to be collateralized and borrowed against in a fully customizable (supply and borrowing ceilings, flexible liquidations, interest rate model, etc) isolated lending pool.

ANKR has set up a pool on BNB (currently $3.5M TVL) to deepen their liquidity on LSD LP pools on THENA.

I would like to propose a partnership with Midascapital.xyz to deploy a fully isolated, risk adjusted pool to follow that same model and allow deeper liquidity and leverage positions of stETH and LDO (on all chains).

I can only see synergies and enhanced capital efficiency in this partnership. This would be interesting for the entire community, and is important to scale to new strategies.

Thanks!

Note:

1. Had to delete the proposal from Snapshot gov and was asked to post it here first, so here we are.
