Keys

You can use thekeys command to either list all the locally availablekeys or show the address of a specific key. You can list all thekeys available by simply running the following command:

jenesis keys list On the other hand, you can look up the address for a specified key by running theshow command and pass thekey name as an argument:

jenesis keys show my_key If you wish to access other key functionalities, includingadding new keys ,looking up an address , andrecovering keys , you can use theFetchd CLI - Managing Keys ↗ guide.
