I was curious, will there be an actual token swap when mainnet goes live and will exchanges then have to switch trading over from ERC20 on ETH main net to Enigma native coin or will there be some type of ERC20 to native coin bridge similar to parity bridge: https://github.com/paritytech/parity-bridge

The reason I ask is because there is a working production bridge solution over at POA Network that shows this concept in action and might be an excellent use case for interoptibility on Enigma right away.
