Overview

About

Koi is a DeFi platform, serving as a liquidity hub for all projects on [zkSync](#) . Koi's dynamic dApp features both a concentrated and standard pool AMM DEX, complete with limit orders, a farming platform, and a bond platform. Experience the evolution of DeFi 2.0 with low fees and gas-less swaps.

The Team

The team behind Koi has a deep history with Zero-Knowledge protocols in crypto. Before Koi, the team created the first Zero-Knowledge Atomic Swap protocol between BTC and UTXO based chains, along with innovative work on Zerocoin and Sigma addressing schemes and transactions. Now, they bring that expertise to Koi and their new initiative: the Koi DAO. With a team that has a proven track record of innovation and expertise, Koi is ready to become a leading player in the zkDeFi space by building on zkSync and driving long-term value to its community.
