High-level

High-level Overview Validator Client Pseudo Code

```
Copy fn process_bundle(bundle): if my tip distribution account doesn't exist for this epoch: create_tip_distribution_account() if tip payment tip receiver isn't my tip distribution account: change_tip_receiver() execute_bundle(bundle)
```

ChangeTipReceiver, ClaimTips, and ChangeBlockBuilder

?

These functions drain accounts to all parties and let one change the tip receiver, block builder, and block builder fee. The tip_receiver can be any account, but the foundation encourages one to use the tip distribution account for the validator.
