Intro

Two weeks ago, we held the first in a soon-to-be many-part series of hackathons by Flashbots with a simple ask:

Come test your mettle and forge the [Future of MEV](#) in the Crucible.

The [Crucible](#) hackathon was an intense, innovation-driven event in NYC designed to bring together our strongest and Rust-savviest SUAVE contributors to help us tackle cutting-edge problems at the edge of the MEV design space!

Overview of Projects

After a week of successful hacking, the following projects emerged!

- [OP Stack Interop Builder](#)

- [Bottom of Block Back Runner](#)

- [Salary Expectations Checker](#)

- [Layer 2 Rust Block Production Exploration](#)

- [Narwhal Exploration](#)

Next Crucible

There is no exact date for the next Crucible Hackathon, but be sure to prep your skills, because it's wont be too long
