We liked the [Reusable Enclaves](#) so much we reached out to the authors, and you can watch Shixuan Zhao's amazing presentation and the post-presentation Q&A in [Flashwares VII: Shixuan Zhao - Reusable Enclaves](#).

Highly recommended for anyone thinking about TEEs and their applications, also in web3. Especially interesting to us was enforcing compiler instrumentation through AoT to achieve nested attestations, and I can see the idea finding its way into web3 TEE stack.

Curious about your thoughts!
