Being a delegate requires constantly staying up-to-date due to the sheer volume of information that needs to be digested. I experienced this firsthand during my time as the governance co-lead at @blockchainatusc.

To address this pain point, we are excited to announce the alpha launch of the Tribuni Telegram Mini-app, a governance info aggregation app built by and for delegates.

Tribuni allows delegates to receive alerts

on live proposals, get proposal summaries

, and stay updated on the superchain ecosystems such as Optimism, Synthetix, Frax, and more. We chose Telegram as our platform because it has the highest concentration of crypto users and offers a mobile-first, all-in-one experience. This allows users to receive updates seamlessly without needing to switch between different apps, which helps to reduce the tooling silo in governance, making it more engaging and convenient for users. This project emerged from the ETH Denver 2024 hackathon, and we have continued to develop it since then.

We would like to extend our gratitude to all the beta testers @Juanbug_PGov @brichis @katie @rshuel @LauNaMu @v3naru_Curia @chaselb @jayyu23) for their invaluable help and feedback. Additionally, we appreciate the generous grant provided by the Grants Council, which has made this project possible.

We invite you to start using Tribuni_Bot with the invite code: POTATO

We are actively developing new features as outlined in our grant applications and eagerly anticipate user feedback. Please join telegram groupchat for technical support and to share your thoughts and experiences with us.
