Classic: how to provide liquidity

Due to divergence loss , you are not guaranteed a positive return! The below guide is available with and without images, select the tab that suits you best.

Text based With images

How to provide liquidity

1. First connect your wallet to Orca.
2. SelectLiquidity
3. at the top of the main screen.
4. In theExplorer
5. find the desired pool then clickDeposit.
6. Select either a preset price range or create a custom range. If using a preset range clickNext step: Choose amount
7. and skip step 5.
8. (Optional) to create a custom range drag the sliders on the liquidity distribution graph, type the MIN and MAX values, or use the+
9. and-
10. buttons. When ready clickNext step: Choose amount.
11. Enter the number of tokens to deposit, this will need to match the ratio for the chosen price range (or use theMatch deposit ratio
12. toggle see step 7). Then clickPreview
13. .
14. (Optional) activate theMatch deposit ratio
15. toggle to trade your tokens to match the deposit ratio. ClickTrade and preview
16. then confirm in your wallet.
17. To track the performance of your position, record or take a screenshot of the information on this screen. You can activate range alerts here to receive alerts if the price moves out of your range.
18. When ready clickConfirm deposit
19. , review the details in your wallet, including payable network fees and approve.
20. REVIEW CAREFULLY
21. it is critical you check your range and the current price of the pool match your intentions, depositing liquidity at a price not consummate with wider market values may result in loss.
22. Deposit Complete!   You will now see an image of youposition NFT
23. which is in your wallet.
24. DO NOT
25. sell or burn this NFT. You can send it to another wallet to transfer your position, but (whale forbid) please don't burn or sell it, or you'll lose your liquidity! 26.
