Sandbox vs Live

Every project you create in Dynamic comes with a Sandbox and a Live environment. Both these environments behave similarly but we've customized the Sandbox environment to make it ideal for testing and exploring features.

Sandbox should only be used for testing

Sandbox user limits are rolling out soon, and we wanted to give you a heads up. Please make sure you're using your live environments in production.

Key Differences

1. Everything is free
2. : all Dynamic features on Sandbox are free. Whether you
3. choose to upgrade to our Advanced tier or not, all the features that we offer
4. will be available for you to test and explore.
5. Sandbox is limited to 100 users
6. : your Sandbox environment is intended to
7. help you test configurations and features and is not intended to be live on
8. your site. We therefore have limited Sandbox to 100 users. After 100 users,
9. you will not be able to authenticate new wallets unless you delete users.
10. You can delete users in Sandbox
11. : having to make new wallets to test an
12. onboarding for first time users is tedious and, frankly, annoying. We don't
13. like it and we figure that you won't either. While it's not best practices to
14. delete live customers, in Sandbox, you can simply hit the Trash icon in your
15. user management table and delete users in your Dashboard. It's a simple click
16. and will allow you test more easily test your wallets and replicate the first
17. time user experience.
