Hello everyone, this is Anil from Witval validator.

Witval is the validator arm from Vitwit (https://vitwit.com). We are a web3 technology consulting, services and infrastructure company. We have a team of 20+ engineers specilized in blockchain research & development & devops. We are validating across 20+ production networks, majorly focusing on Cosmos ecosystem. We are one of the top validators on Regen Network, Tgrade, Akash, Passage and Polygon. Along with running validator for the networks, we also bring value to the table by running IBC Relayers, explorers and staking interfaces. We help community with active governance participation and guidence on stake decentralization & security.

We have built our own version of PoS explorer called Aneka. Aneka is now supporting Passage, Akash, Regen and Tgrade. We have a custom built interface for the cosmos ecosystem users, called Resolute (https://resolute.vitwit.com/). Resolute allows users to do all the bank, staking & governance transactions. It also has support for multisig wallets, authz, feegrant and groups.

We are really excited to be part of dydx community and looking forward to contribute more with tooling, research and integrations in the future.
