Just like you, I like rollups too. And semantics? Oh, I love 'em. Jon introduced us to the [Rollup Multiverse](#) and broke our sacred timeline. It is time to explore all the variants that got created.

So, here's what I aiming for with this post:

1. I'm writing this to get a better grip on the whole system myself, and I'm hopeful you'll find some value in it too.

2. I want us to challenge previous definitions and see what works best with the knowledge that we have right now. That way, when we're debating the best sequencer design on CT, we'll all be in the know about the latest meta.

3. I'm finally putting pen to paper (or fingers to keyboard) on topics I genuinely care about. So, whether you like it or not, this won't be the last you hear from me!
