I'm looking at [subway/bot at master · libevm/subway · GitHub](#) and I'm trying to figure out how do I get FLASHBOTS_AUTH_KEY

that's defined in the environment variable?

I also checked [GitHub - flashbots/simple-arbitrage: Example arbitrage bot using Flashbots](#), it also have FLASHBOTS_RELAY_SIGNING_KEY

- FLASHBOTS_RELAY_SIGNING_KEY

[Optional, default: random]

- Flashbots submissions require an Ethereum private key to sign transaction payloads. This newly-created account does not need to hold any funds or correlate to any on-chain activity, it just needs to be used across multiple Flashbots RPC requests to identify requests related to same searcher.

when I go to the URL in the simple-arbitrage

repo, I'm seeing this:
