# How to list a new asset with CoinGecko

To register an asset with CoinGecko it is typically a requirement that the asset is first listed for trading in a market tracked by CoinGecko, such as Orca.

Once liquidity for your asset exists on Orca (see [How to create an initial pool for an asset](#)) it should be easier to register your asset with CoinGecko.

CoinGecko provides detailed documents for the process of adding a token to Coingecko, which can be found here ([How to list new cryptocurrencies on CoinGecko](#) ). [Previous How to add rewards to a pool on Eclipse](#)[Next Orca on Eclipse for Traders](#) Last updated5 months ago
