Rainbowkit-celo

Overview of Rainbowkit-celo

Rainbowkit-celo

RainbowKit is a React library that makes it easy to add wallet connection to your dapp. It's intuitive, responsive and customizable.

On top of that, we at Celo developed a plugin to help rainbowkit developers support the CELO protocol faster. It includes the chain information as well as the main CELO wallets (currently Valora, Celo Wallet, and Celo Terminal).

- [Demo page](#)

Installation

npm

install @celo/rainbowkit-celo This package has@rainbow-me/rainbowkit as a peer dependency and expect it to be installed too. Follow[their instructions](#) if that's not done yet.

Usage

import

{ connectorsForWallets , RainbowKitProvider , wallet , }

from

"@rainbow-me/rainbowkit" ; import

{ configureChains , createClient , WagmiConfig }

from

"wagmi" ; import

{ jsonRpcProvider }

from

"wagmi/providers/jsonRpc" ;

// Import known recommended wallets import

{ Valora , CeloWallet , CeloDance }

from

"@celo/rainbowkit-celo/wallets" ;

// Import CELO chain information import

{ Alfajores , Celo }

from

"@celo/rainbowkit-celo/chains" ;

const

{ chains , provider }

=

configureChains ([Alfajores , Celo] , [jsonRpcProvider ({

rpc :

```
( chain )

=>

( { http : chain . rpcUrls . default } )

} ) ] ) ;

const connectors =

connectorsForWallets ( [ { groupName :

"Recommended with CELO" , wallets :

[ Valora ( { chains } ) , CeloWallet ( { chains } ) , CeloDance ( { chains } ) , wallet . steak ( { chains } ) , wallet . walletConnect
( { chains } ) , ] , } , ] ) ;

const wagmiClient =

createClient ( { autoConnect :

true , connectors , provider , } ) ;
```

// ... Your exisiting app.
