I am using opensignals to access the following file. The script was adapted from Numerai's example code.

https://numerai-signals-public-data.s3-us-west-2.amazonaws.com/signals_train_val_bbg.csv'

For about the last week I have been receiving the error message : HTTPError: HTTP Error 403: Forbidden

Has something changed in this area making the file inaccessible? Is the an alternative location of the file which I can access ?
