seid query dex get-prices

Get all the prices for a pair from a dex specified by the contract-address. The price and asset denom are used to specify the dex pair for which to return the latest price. For the latest price use get-latest-price instead or for a specific timestamp use get-price.

Usage: seid query dex get-prices [contract-address] [price-denom] [asset-denom] [flags]

Flags: --height int Use a specific height to query state at (this can error if the node is pruning state) -h, --help help for get-prices --node string : to Tendermint RPC interface for this chain (default "tcp://localhost:26657") -o, --output string Output format (text|json) (default "text")

Global Flags: --chain-id string The network chain ID --home string directory for config and data (default "~/.sei") --log_format string The logging format (json|plain) --log_level string The logging level (trace|debug|info|warn|error|fatal|panic) --trace print out full stack trace on errors Last updated onJuly 1, 2024 get-price get-registered-contract
