gm

I am doing some research for my blog and I hope this is the right place to pose this question. I am comparing different grants and incentive programs across the space and trying to collect some basic info from each and then keep it updated over time.

I was wondering if someone might be able to show me the best place to see information on Secret Network's different programs including:

- Are incentives paid out in USD (or other fiat) or native token?

- How much of the allocated funding has been used or consumed for each program and is there somewhere public where it is tracked?

- Can you provide names and consumption totals for projects who have received incentives?

- How does governance work for each program? Is it programmatic based on specific criteria or does it require human intervention?

- How are funds distributed? Is there a wallet address that can be monitored where the funds are sent from?

If someone might be able to help with any information on this front I would greatly appreciate it.

Any help is appreciated. If questions for me please just let me know.
