Quick Start Guide

Collateral onboarding applications in MakerDAO are of two main types based on the nature of the collateral being onboarded: Crypto native or Real World Asset collateral types.

1. Start by filling out the [MIP6 Collateral Application Template](#)
2.
    - For crypto native collateral (ERC20-like tokens with on-chain price feeds) make sure to review and comply, as much as possible, with the criteria defined in the [MIP6 Recommended Guideline Metrics for Onchain Collateral Onboarding](#)
3.
    - For Real World Assets (RWA) make sure to review and comply with [MIP67: Methodology and Review Process for Structured Finance Transactions](#)
4.
    - . [The Methodology provides a set of criteria which should guide the drafting of the MIP6 application. Only in the case of RWA, to ensure application quality, it is strongly recommended to contact the [Real World Finance Core Unit (RWF CU) prio](#)
5.
    - r to publishing the application.
6. *
7. Publish the Collateral Onboarding Application in the "[Collateral Onboarding](#)
8. " category in the Maker forum.
9.

For a deeper understanding of the application process, please [read along](#) .
