GovAlpha, as the Governance Scope Facilitator, presents a unified list of action items for the next Executive Vote that require Responsible Facilitator approval for inclusion. These require approval from the Sustainable Ecosystem Scaling (SES) team as the Responsible Facilitators for the relevant scopes. These items have been consolidated rather than remaining scattered across multiple threads to simplify the review process.

The items listed below require the SES team's approval before advancing to an executive vote:

1. Activate the AutoLine (DC-IAM) for RWA015-A (BlockTower Andromeda)

. Per the technical assessment, RWA015-A, a specific project, launched with a restricted Debt Ceiling of 2.5 million DAI. After successfully testing the structure, we can activate the DC-IAM for this vault type and expand the Maximum Debt Ceiling to the approved 1.28 billion DAI. The Target Available Debt will be set to 50 million DAI, and the Ceiling Increase Cooldown will be set to 1 day. The Oracle Price of RWA015-A will be increased to match the Maximum Debt Ceiling. This is necessary to allow the vault to mint Dai.

1. Deploy a fresh OutputConduit for RWA015-A (BlockTower Andromeda)

. This task is contingent on the successful execution of the test draw

of 2.5 million Dai in the prior executive proposal. If successful, a new OutputConduit will route Dai from the RWA015-A vault via the USDP Peg Stability Module (PSM) instead of the USDC PSM. After draining the USDP PSM, a further OutputConduit modification will enable the use of a different PSM.

1. BlockTower Legal Expenses Funding

. As outlined in this forum post, BlockTower will receive 133,466 DAI, rounded up from 133,465.97 DAI, at this address to cover legal costs, as described in the Stability Scope. The rounding up to whole Dai follows an established practice of simplifying spell code.

1. Include the Chainlink Keeper Treasury Address

. Based on this forum post, we now have the Chainlink Keeper Network Treasury address. The next spell should include this to complete the actions approved by Maker Governance in the initial poll.

1. Update RWA007-A doc

Parameter

. The on-chain doc

parameter, containing an IPFS hash of the legal documents relevant for RWA007, is currently outdated following the increase of the Debt Ceiling for this collateral type. The RWA007-A doc

should be updated to QmY185L4tuxFkpSQ33cPHUHSNpwy8V6TMXbXvtVraxXtb5 - see here for more details.
