2022 Q1 Roadmap and Planning

- Community Call is scheduled for this Thursday on Discord at 3:00 PM PST

Current Status

- SushiSwap Integration is complete: Metamask and Walletconnect Support are 100% Live

- Per the partial delay half of the amount will be used

Planning for 2022

- I will be stepping down from CEO position and transitioning to CTO. We will be looking for a well known CEO to help manage and structure our growth phase now that OpenMEV is live and in production. This will also entain a new CMO and revamping our current marketing/branding.

- We will be taking more aggressive measures for marketing and promotion with this new changes in leadership.

- I will still be active in the usual fashions (forums, telegram, community call, etc).

- We will release a technical roadmap this Friday. A preliminary sketch for the next 3 months includes supporting 1-2 new protocols on chain for Ethereum mainnet and at least 1 new chain for Q1 2022. Suggestions for projects to support are welcomed as well as which chains to target. Chains to target that are open to suggestion should be chains that do not have current flashbots support.

Thanks, and Happy Holidays and Merry Christmas!
