Hi everyone.

Earlier today restaked.app shipped the mvp for its EigenLayer data & analytics[dashboard](dashboard) with real-time rankings & daily TVL charts for each of the Operators in the EigenLayer ecosystem. We will be shipping a similar dashboard for AVSs soon.

Our goal is to be the one-stop shop for metrics & analysis related to EigenLayer and its AVS ecosystem and we want to include the EigenLayer community in the process.

We'll kick off the dialogue with some open questions. Please share your thoughts in this thread or hop into our newly-created Discord.

What information or data has been most challenging for you to access so far?

What Operator or AVS metrics are you most interested in tracking in the future?

What analytics tools would be most valuable for you as a restaker and EigenLayer community member?

We are excited to hear everyone's thoughts and look forward to keeping the conversation going!
