Thanks [@cmwaters](#) for the CIP!

Mind elaborating whether the 5/6 quorum is sufficient if observed at a certain height before the upgrade height? For example, if at height $x <$ upgrade_height the quorum is achieved, but at a later height $y<$upgrade_height the quorum is not maintained (due to voting power change), does the upgrade still proceed as planned at upgrade_height?

Also, can the upgrade occur at an earlier height z ($z<$ upgrade_height) upon receiving a MsgTryUpgrade for that height z?
