Proposal Name:

Ape Coin Price - Alexa Skill

Proposal Category:

Brand Decision Proposal

Abstract:

I created an Alexa Skill that shares the price of ape coin and want to utilize the ape coin logo to make it an official Ape Coin Alexa skill with proper affiliation. The Ape Coin Alexa skill will serve as an additional tool for holders to receive price information.

Author Description:

Software engineer with over 7+ years of development experience.

Team Description:

Software engineers with backgrounds as full stack developers and smart contracts. We had created an AI that we also leveraged in an Alexa Skill that had over 100,000 monthly users before and helped us earn partners and won a CES Innovation award with our partners. Members of our team have minted bored apes and have been early into the NFT space.

Motivation:

Ape Coin Alexa skill aims to create another fun and easy way to access the price of ape coin. The Ape Coin Alexa skill hopes to serve the communities needs by enforcing price transparency and hopefully to ensure that Ape Coin is a relevant crypto coin.

Rationale:

Ape coin price Alexa skill serves to help the community receive real time Ape coin price through their Alexa. The skill can also help promote and introduce APE Dao to those who are not in the community yet while building trust for the adoption of APE . We aim to provide consistent and reliable information for all users to make their own responsible decisions.

Specifications:

Alexa Skills

Steps to Implement:

The skill is already developed and hosted. There would just be minor hosting fees if any and we will do our best to follow best practices hosting the applications. Our team has passed AWS Certification assessments.

If dex screener api lets us continue using it for queries, there is no further step for implementation. If they don't let us, we'll need to make and host our own endpoint that only queries dex one or two times per minute if there's too much traffic. If we surpass the threshold and IP gets blocked or throttled, we can create and call our own API hosted on lambda instead of dex screener.

We would also like to ask for permission to use the Ape Coin logo on the Alexa Skill and add info about endorsement by ApeCoin DAO in the Skill's description.

Timeline:

It is ready and finished already. Once our proposal is approved, we can update the logo and description of the Alexa skill right away. Any possible changes like creating our own API and hosting it will take less than a week's time.

Link to enable the ape coin price skill:https://www.amazon.com/dp/B0BWJKHSJ3?ref&ref=cm_sw_tw_r_as_dp_FIk0LR322YVuU

Overall Cost:

60 ApeCoin
