FAQs

Under Construction If you have an issue that isn't addressed, please [contact us in Discord](#) for troubleshooting.

Are there any additional tutorials for Blockscout deployment? We are currently working on more tutorials from the team. There are some user and community generated videos available here: https://drive.google.com/drive/folders/1dH-ZxV1ShQ-cb7gObTXs3MtwSqVNJOqW Where are the environmental variable (ENV) settings located?* Frontend envs: https://github.com/blockscout/frontend/blob/main/docs/ENVS.md * Backend envs: https://github.com/blockscout/blockscout/blob/master/docker-compose/envs/common-blockscout.env * How do I connect the frontend to the backend? This is done through the [proxy setup](#) . Ensure you've added the API_V2_ENABLED='true' in your blockscout instance. Do the frontend and backend need to be under the same domain? Yes. Be sure to proxy all /api, /socket requests to the backend application and all other requests to the frontend. More info on the [proxy setup](#) page. What are the variable settings for a Polygon Edge client? Be sure to set the following envs when setting up a Polygon Edge instance:

- ETHEREUM_JSONRPC_VARIANT=geth
- INDEXER_INTERNAL_TRANSACTIONS_TRACER_TYPE=polygon_edge * Blockscout API/indexer is using 100% CPU, what should I do? You should allocate more computing resources/cores to the instance. What should I set the proxy_pass variable to? Typically you should set to http://youripaddress:your_port_number . Blockscout may not work if you set to http://0.0.0.0: your_port_number
