IRIShub Client SDKs

IRIShub SDK is a software development kit based on the Endpoint provided by IRIShub, which provides great convenience for users to quickly develop applications based on the IRIShub chain.

Available in three languages:

- [irishub-sdk-goopen in new window](#)
- [irishub-sdk-jsopen in new window](#)
- irishub-sdk-java (coming soon)

# #

Design Goals and Concepts

The SDK mainly implements the encapsulation of the functions of IRIShub modules, including: auth, bank, gov, htlc, keys, nft, oracle, random, record, service, staking, token. So that users can quickly realize the development of the following functions:

- Generating, Signing and Broadcasting Transactions
- Private Key Management
- Subscribe Events
