[Vyper smart contracts development language](#) is used across different cases in Lido DAO and Lido on Ethereum protocol smart contracts.

In order to help in making the programming language more resilient, LEGO has agreed to support two initiatives with a shared Boulder grant:

1. 50k DAI towards short-term bug bounty on historical and current compiler versions (details to be shared in comments later)

2. 50k DAI towards [audit competition](#) to be held 14 September — 04 November.

The address to receive grants is [vyper-contest.eth](#). The update on the transfer will be provided in this thread.

For more info about the previous LEGO grant to Vyper team check out the post[Grant to support Vyper development](#)
