Currently when buying GM using a pair of tokens user needs to manually balance the USDC/token amount to be equal. Would be nice to have a button that when clicked automatically inputs the required token or USDC so the purchase if 100% balance (hence avoid extra fees). Example:

Say I want to buy the BTC/USDC GM. I select the buy option (pair). I have 1 BTC which I input into the BTC balance section. I then have to manually calculate the required USDC to input. I with there is button to just click and the USDC gets filled at current USDC price of 1 BTC. And vice versa if I input USDC first and not BTC.
