Specifications

This page quickly covers what the Filecoin Specification is, and how you can access it.

The Filecoin specification is the technical document that outlines the details of how the Filecoin network operates, including the rules for participating in the network, the format of the transactions that are used to manage data storage, and the algorithms and data structures that are used to store and retrieve data on the network. The specification is an important reference for developers who are building applications on top of Filecoin, as it provides them with the necessary information to create integrations that are compatible with the rest of network.

The Filecoin specification is aliving document, with frequent updates and changes as the Filecoin network grows. The specification is available to view at[specs.filecoin.io](specs.filecoin.io) .

You can suggest changes to the specification[over on GitHub](over on GitHub) .
