I was attempting to move my staked AAVE/wETH balancer pool ABPT token from v1 to v2.

I clicked migrate and I see the transaction as a smart contract executed.

However, when I check the staking tab on AAVE site, it still shows my ABPT in v1 version.

I am not accruing staking rewards.

Can someone please help me, and clarify what I need to do to get my staked ABPT over to v2 which is actually giving yield?
