IUniswapV3SwapCallback

Callback for IUniswapV3PoolActions#swap

Any contract that calls IUniswapV3PoolActions#swap must implement this interface

Functions

uniswapV3SwapCallback

function

uniswapV3SwapCallback (int256 amount0Delta , int256 amount1Delta , bytes data)

external Called tomsg.sender after executing a swap via IUniswapV3Pool#swap.

In the implementation you must pay the pool tokens owed for the swap. The caller of this method must be checked to be a UniswapV3Pool deployed by the canonical UniswapV3Factory. amount0Delta and amount1Delta can both be 0 if no tokens were swapped.

Parameters:

Name Type Description amount0Delta int256 The amount of token0 that was sent (negative) or must be received (positive) by the pool by the end of the swap. If positive, the callback must send that amount of token0 to the pool. amount1Delta int256 The amount of token1 that was sent (negative) or must be received (positive) by the pool by the end of the swap. If positive, the callback must send that amount of token1 to the pool. data bytes Any data passed through by the caller via the IUniswapV3PoolActions#swap call Edit this page Previous Permitable Next Introduction
