Hi all,

I am starting this thread to further discussion of how to increase wallet support for Secret (SCRT), which is essential for end user adoption. Right now [Mathwallet](#) is the best available option for community members. I have spoken with multiple other wallet teams as well (Cosmostation, Lunie, Atomic…) to see how we can move forward with broader SCRT support. It's clear that community demand has a large impact on ensuring wallets add support in a timely manner.

We will have more options in the very near future, but I am wondering if there are those in the community who can either:

1. independently develop an SCRT wallet (which imo would be deserving of community pool funding!)

2. help to identify and approach existing wallets that we want to add support

3. think of other ways to improve SCRT wallet support

This is a top priority for the ecosystem and I want to make sure this receives a lot of visibility! Please post here if you are interested in collaborating on this effort or have thoughts.
