I'd like to integrate CoW Swap into my community-focused website. However, I've encountered an issue with one of our popular tokens, Hydra (0xCC7ed2ab6c3396DdBc4316D2d7C1b59ff9d2091F), which is currently unsupported on the platform.

Hydra is a standard ERC-20 token with good liquidity. Is there a way to get it added to CoW Swap?

Btw I got kicked from the Discord by mistake, so I'm asking here. Any help on how to fix this would be great. Thanks!
