Gm everyone

We're excited to share with you our project◯ Dhive. We're building governance tools that make it easy to access and understand DAO data, with analytics and monitoring features.

Our goal is to help users understand governance activities better so that they can make well-informed decisions in a trusted environment.

What makes our platform stand out:

1. aggregates both on-chain and off-chain governance

2. profiles display chain-agnostic credentials (e.g. ens, lens profiles)

3. has a decentralized notification system (e.g. status change on proposals notifications)

We are happy to announce that we've recently added Uniswap to our list and we invite you to check it out: https://dhive.io/dao/uniswap/.

We want Dhive to be the best dao tool for the communities it serves so we welcome your thoughts and feedback on how we can improve.

Thank you!
