Secret Network

is a privacy-first, blockchain-based protocol that allows decentralized applications to utilize encrypted data without revealing it. Using groundbreaking privacy technologies (such as trusted execution environments), Secret Network allows developers to build new types of powerful, permissionless, privacy-preserving applications - Secret Apps.

Secret Network is a proof-of-stake network with a native coin, Secret (SCRT),

that is used for staking, governance, and network fees. The first Secret Network mainnet was launched in February 2020.

This forum is for developers and contributors to discuss Secret Network and elements of the protocol, including:

- protocol design

- operating secret nodes

- secret contract design and implementation

- Secret Applications

- private computation

Posts should contribute to the quality of conversation - please be considerate.

We're happy you've joined us. Thanks, and keep building!
